

# Chairing by Crival®

## The reference piece of tomorrow.

It took four years to develop this classic youth chair of tomorrow. Advises have been implemented in close co-operation with many professional fields such as; ergonomic, baby care, safety, health, as well as users such as: mothers, babies, kids, teenagers, and finally people from the trade.

The chair, developed in Denmark and Switzerland, is manufactured in Europe with the most reliable manufacturer and went through the strong quality and safety test of TÜV Rheinland in Germany.

The never-ending mutation "Chairing" allows, makes no compromise

It is:            a extremely suitable High Chair  
                     a real Kid Chair  
                     a specific Teenager Seat

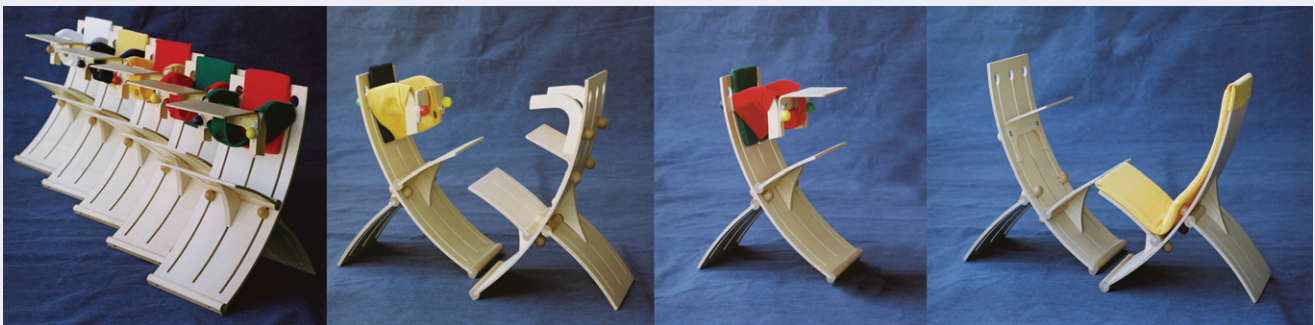

When the baby grows, he keeps the same chair in use all the time.  
With every change, the chair seems to be a new one, well adapted to the concerned age.  
The features are specific to each age group in terms of:

- safety
- practical requirements
- comfort
- style and look

*The question is not how long the chair lasts but how long you remain young!*

Chairing because life goes on...
